

Uttam Kumar (Java Backend Engineer)

📍 Bangalore | +91 79050 25730 | [in](#) LinkedIn | [🌐](#) Personal Website | [🐙](#) Github | [🔗](#) Scaler | [👨‍🍳](#) Codechef | [✉](#) uttamkumar3797@gmail.com

SKILLS

- **Programming Languages** : Java, JavaScript, SQL
- **Libraries and Frameworks** : Spring Boot, Hibernate, REST API, Microservices
- **Tools** : Git & GitHub, IntelliJ IDEA, Postman, JIRA, Maven
- **Other Skills** : System Design, Low level Design (LLD), Basic High level Design (HLD), REST API Design Principles

EXPERIENCE

Software Development Engineer (Backend) Verint

Sep 2023 – Present
Bangalore

- Designed and implemented backend integration solutions for enterprise systems, improving interoperability and reducing manual effort.
- Built automated adapters using Java and Spring Boot, reducing manual integration effort by 70%.
- Developed reusable generic adapters, improving development efficiency by 50% across multiple client use cases.
- Handled complex edge cases to ensure data accuracy, consistency, and system stability.
- Optimized APIs, reducing response time by 30% through improved algorithms and service design.
- Enhanced modular architecture, enabling scalable and non-breaking feature additions.
- Improved logging and monitoring mechanisms, enabling faster debugging and issue resolution.
- Collaborated with cross-functional teams to deliver integration features aligned with business requirements.
- **Tech Stack**: Java, Spring Boot, REST APIs, Git, Postman, IntelliJ

Backend Engineer Digit Insurance

Dec 2021 – Sep 2023
Bangalore

- Developed and optimized REST APIs using Java and Spring Boot, reducing manual workflows by 90%.
- Designed PDF generation and notification modules (Email/SMS), improving processing speed and communication efficiency.
- Optimized MySQL database schema for better performance and scalability.
- Integrated backend services with customer-facing systems, improving response time and policy issuance flow.
- Implemented validation and error-handling mechanisms to improve system reliability and reduce failures.
- Improved API design and code structure for better maintainability and scalability.
- Worked in Agile environments using JIRA, improving delivery efficiency and team collaboration.
- **Tech Stack**: Java, Spring Boot, MySQL, REST APIs

PROJECTS

Digital School SaaS Prototype (Ongoing)

🔗 <https://github.com/uttamkumar37/digital-school-saas-prototype>

- Developed a multi-tenant SaaS Digital School Management System, enabling 100% digital management of online lectures, classes, and events for over 500 users.
- Implemented JWT-based authentication with Spring Security, ensuring secure access for multiple schools through schema-based tenant isolation.
- Structured backend as modular Spring Boot microservices, enhancing scalability and deployment efficiency with Docker and GitHub Actions integration.
- Designed comprehensive folder structures for a React web portal, mobile app (React Native), and Mac desktop, streamlining development and onboarding processes.
- Created a GitHub-ready architecture with a CI/CD pipeline, improving deployment speed by 30% and providing thorough onboarding documentation and schema scripts.
- **Tech Stack**: Java, Spring Boot, Spring Security, JWT, Microservices, Docker, GitHub Actions

EDUCATION

Scaler Neovarsity

2026

MS in Computer Science

🔗 Scaler Profile

- Data Structures and Algorithms (Basic, Intermediate, Advanced), Computer Systems and Fundamentals
- Low-Level Design (LLD), High-Level Design (HLD), Backend Capstone Project
- Product Management for Engineers, Data Engineering, Full Stack Development

IIT Guwahati

2020

B.Tech in Electronics and Communication Engineering
