SKILLS

- **Programming Languages** : Java, JavaScript, SQL
- **Libraries and Frameworks** : Spring Boot, Hibernate, REST API, Microservices
- **Tools** : Git & GitHub, IntelliJ IDEA, Postman, JIRA, Maven
- **Other Skills** : System Design, Low level Design(LLD), Basic High level Design(HLD), REST API Design Principles

EXPERIENCE

Software Development Engineer (Backend)

Sep 2023 - Present

Verint

Bangalore

- Designed backend integration solutions for two enterprise systems as an R&D Engineer.
- Automated adapters developed in Core Java and Spring Boot, achieving a 70% reduction in associated manual integration efforts.
- Developed a generic adaptor that can be reused by multiple clients with matching needs, resulting in a 50% improvement in development efficiency.
- Managed intricate edge cases throughout to ensure accuracy and system stability of data during integration.
- Optimized integration performance and reduced API response time by 30% through enhanced algorithmic logic and service component design.
- Refined the modular architecture of the codebase by adding new features without breaking the existing system, adhering to the spiral approach to modularity.
- Utilized a tech stack that included Core Java, Spring Boot, Java REST APIs, Git, Postman, and IntelliJ as part of the implementation tools in the project.

Backend Engineer

Dec 2021 - Sep 2023

Digit Insurance

Bangalore

- Developed and optimized RESTful APIs using Java and Spring Boot to automate insurance workflows, resulting in a 90% reduction in manual document handling.
- Designed and implemented PDF generation and delivery modules, enhancing processing speed and improving user communication via automated Email and SMS notifications.
- Employed MySQL to restructure and optimize the insurance database schema for better performance and scalability.
- Collaborated with cross-functional teams to integrate backend services with customer-facing portals, leading to faster response times and improved policy issuance flow.
- Followed Agile practices, managing tasks and sprints using JIRA and improving delivery cadence and collaboration.
- Tech Stack used: Java, Spring Boot, MySQL, REST APIs

PROJECTS

Digital School SaaS Prototype (Ongoing)

🔗 <https://github.com/uttamkumar37/digital-school-saas-prototype>

- Developed a multi-tenant SaaS Digital School Management System, enabling 100% digital management of online lectures, classes, and events for over 500 users.
- Implemented JWT-based authentication with Spring Security, ensuring secure access for multiple schools through schema-based tenant isolation.
- Structured backend as modular Spring Boot microservices, enhancing scalability and deployment efficiency with Docker and GitHub Actions integration.
- Designed comprehensive folder structures for a React web portal, mobile app (React Native), and Mac desktop, streamlining development and onboarding processes.
- Created a GitHub-ready architecture with a CI/CD pipeline, improving deployment speed by 30% and providing thorough onboarding documentation and schema scripts.

EDUCATION

Scaler Neovarsity

2026

MS in Computer Science

Profile link - <https://www.scaler.com/academy/profile/8a2951f7f6c5/>

- Data Structure Algorithm(Basic,Medium,Advanced), Computer System and Fundamentals
- Low level design(LLD),High Level Design , Backend Capstone Project
- Product management for Engineers,Data Engineering,Full stack LLD and Development

IIT Guwahati

2020

BE/B.Tech/BS

- Specialization: Electronics and Communication Engineering
